

Extra Notes

UI Frameworks with Angular

Most annoying problem with angular is that we cannot use jQuery with Angular. It messes up working of Angular. So, need to find design frameworks which work without jQuery and give all functionalities also.

1. ng-bootstrap

- Does not have animations
- full bootstrap copy for angular components architecture
- good

2. fuel-ui — **recommended if use of bootstrap necessary!!**

- Over Bootstrap
- Having all the animations for bootstrap components
- Great!

3. ngx-bootstrap

- better than ng-bootstrap
- does not have animations except modals

4. Covalent — **recommended to try!!**

- Great!
- Material Design
- With added animations
- More components than @angular/material2

5. PrimeNG — **recommended to try!!**

- very good one!
- So many components
- animations
- grid

6. material2 - @angular/material2

- Material design
- By angular team
- having less components then bootstrap

7. ngSemantic — I like it!

- Uses Semantic UI
- Sleek, light
- Less no. of Controls
- But very beautiful

8. UIKit — also recommended to try!!

- sleek
 - simple
 - loveable
 - all components available
 - good to use
-
